Interpreter Assignment #2: Statements

Issued: Tuesday, February 23 Due: Thursday, March 18

Purpose

This assignment asks you to extend your Interpreter Assignment #1 interpreter.

Grammar

As before, your interpreter employs an ad-hoc scanner and a recursive-descent parser. The parser builds a strongly typed parse tree, which is then traversed and evaluated. A grammar for the extended source language is:

```
: block
prog
block : stmt ';' block
        | stmt
stmt
        : assn
        | 'rd' id
         | 'wr' expr
         | 'if' boolexpr 'then' stmt
         | 'if' boolexpr 'then' stmt 'else' stmt
         | 'while' boolexpr 'do' stmt
         | 'begin' block 'end'
         : id '=' expr
assn
        : term addop expr
expr
        | term
term
        : fact mulop term
        | fact
        : id
fact
        num
         | '(' expr ')'
```

Assignment

There are several parts:

- Extend your scanner to recognize the new keywords and operators.
- Extend your parser to recognize the new statements and expressions.
- Extend your evaluator to execute the new constructs.
 - You can represent boolean values as double values (e.g., 1.0 and 0.0);
 - For I/O, read from System.in (hint: use a JDK Scanner) and write to System.out.
- Test your solution thoroughly. Add tests to your test suite. The quality of your suite will influence your grade.
