Interpreter Assignment #2: Statements

Issued: Tuesday, February 18 Due: Thursday, March 19

Purpose

This assignment asks you to extend your Interpreter Assignment #1 interpreter.

Grammar

As before, your interpreter employs an ad-hoc scanner and a recursive-descent parser. The parser builds a strongly typed parse tree, which is then traversed and evaluated. A grammar for the extended source language is:

```
: block
    block
              : stmt ';' block
2
              stmt
             : assn
    stmt
              | 'rd' id
              | 'wr' expr
              | 'if' boolexpr 'then' stmt
              | 'if' boolexpr 'then' stmt 'else' stmt
              | 'while' boolexpr 'do' stmt
              | 'begin' block 'end'
10
              : id '=' expr
    assn
11
              : term addop expr
    expr
              | term
13
              : fact mulop term
14
    term
              | fact
15
    fact
              : id
16
              | num
17
              | '(' expr ')'
              | '-' fact
19
    boolexpr : expr relop expr
    addop
21
              | '-'
```

Assignment

There are several parts:

- Extend your scanner to recognize the new keywords and operators.
- Extend your parser to recognize the new statements and expressions.
- Extend your evaluator to execute the new constructs.
 - You can represent boolean values as double values (e.g., 1.0 and 0.0);
 - For ${\rm I/O},$ read from ${\tt System.in}$ (hint: use a JDK ${\tt Scanner})$ and write to ${\tt System.out}.$
- Test your solution thoroughly. Add tests to your test suite. The quality of your suite will influence your grade.
