## Language Website #2: Killer App!

**Issued:** Tuesday, November 19 **Due:** Tuesday, December 3

## Purpose

This assignment asks you to continue developing your team's programming-language website, by adding a larger demonstration program.

## Assignment

There are several parts:

- Meet with your team and choose a reasonably complex problem to solve, using your team's programming language. The problem should be at least as difficult as one of the Language Assignments, but not too difficult.
- Partition the problem among your team's members, so everyone has about the same amount of work to do.
- Develop and integrate your solution.
- Describe your experience to the class in a short oral presentation. Each team will present, as a team, for about 30 minutes, during the last few class-meeting periods.

You don't need to submit LW2. I will grade your presentation in person.

## Hints and Advice

Choose a problem that is appropriate for your programming language. For example, you wouldn't want to use Prolog to a control a dishwasher.

Your presentation should:

- briefly introduce your language
- $\bullet\,$  specify your problem
- $\bullet$  describe your experience solving the problem
